

Matthew Driscoll (L) and Alexander Clavien (R) from LAVO with the Hon. Angus Taylor MP, Minister for Industry, Energy and Emissions Reduction (C).

## **LAVO showcased at the 2021 UN Climate Change Conference**

**15 November 2021** - LAVO (the Company), an Australian technology and lifestyle company powered by hydrogen, was delighted to be featured on the international stage at the Australian Government's pavilion at the 26th UN Climate Change Conference of the Parties (COP26) in Glasgow, Scotland.

Australia's COP26 pavilion focussed on the country's innovations in low emissions technology and included the LAVO flagship product, the LAVO™ Hydrogen Energy Storage System (HESS). Developed in partnership with the University of New South Wales, the LAVO HESS uses patented metal hydride technology to store hydrogen that produces up to 40kWh of electricity, enough to power an average Australian household for more than two days without additional solar input.

LAVO Co-founder and CEO Alan Yu said the invitation to be featured at Australia's COP26 pavilion is a prestigious honour for a company that launched only twelve months prior and demonstrates the Government's support of the emerging hydrogen industry in Australia.

"The LAVO HESS represents the intersection between innovation and environment, delivering a reliable and sustainable energy solution while supporting the transition towards net zero."

"At LAVO we believe that our hydrogen technology is the next generation in energy storage. The applications of hydrogen are exciting and we're only at the forefront of understanding the best ways to apply it to our modern lives. The future of energy is evolving and LAVO is excited to play a role in its future."

Representatives from LAVO were fortunate to connect with leaders from around the world as they discussed the future of energy storage and future plans for the company's patented metal hydride technology across a range of potential applications including a bike and barbeque.

**About LAVO™**

LAVO™ is changing the way people live with energy. A hydrogen technology and lifestyle company, LAVO™ designs and manufactures renewable hydrogen energy storage solutions for residential and commercial use. LAVO™ will challenge convention, spark a global conversation and enable a meaningful change in attitudes and behaviours around sustainability, the environment and responsible consumerism. Founded in 2020, LAVO™ Hydrogen Technology Limited was established to fast track the commercialisation of technology developed within the Hydrogen Energy Research Centre cofounded by Providence Asset Group and the University of New South Wales. LAVO is headquartered in Sydney Australia. For more information visit [www.lavo.com.au](http://www.lavo.com.au).
